1. Final Scoreboard

End of day 2026-04-22. Numbers from each engine's report.md (authoritative).

Rank	Engine	Net P&L	% Cap	Trades	Win %	Avg Win	Avg Loss
🥇	v5_7 Intraday Box	Rs +61,552	+6.16%	156	92%	Rs +438	Rs -127
🥈	v5_6 Darvas Box	Rs +61,284	+6.13%	164	92%	Rs +423	Rs -199
🥉	v5 (Rust-unlocked)	Rs +44,612	+4.46%	138	89%	Rs +381	Rs -163
—	v5_classic	Rs +10,291	+1.03%	69	74%	Rs +216	Rs -89
—	v4 composite	Rs -303	-0.03%	39	51%	Rs +225	Rs -253
—	v5_3 staged	Rs -2,364	-0.24%	10	0%	Rs +242	Rs -556

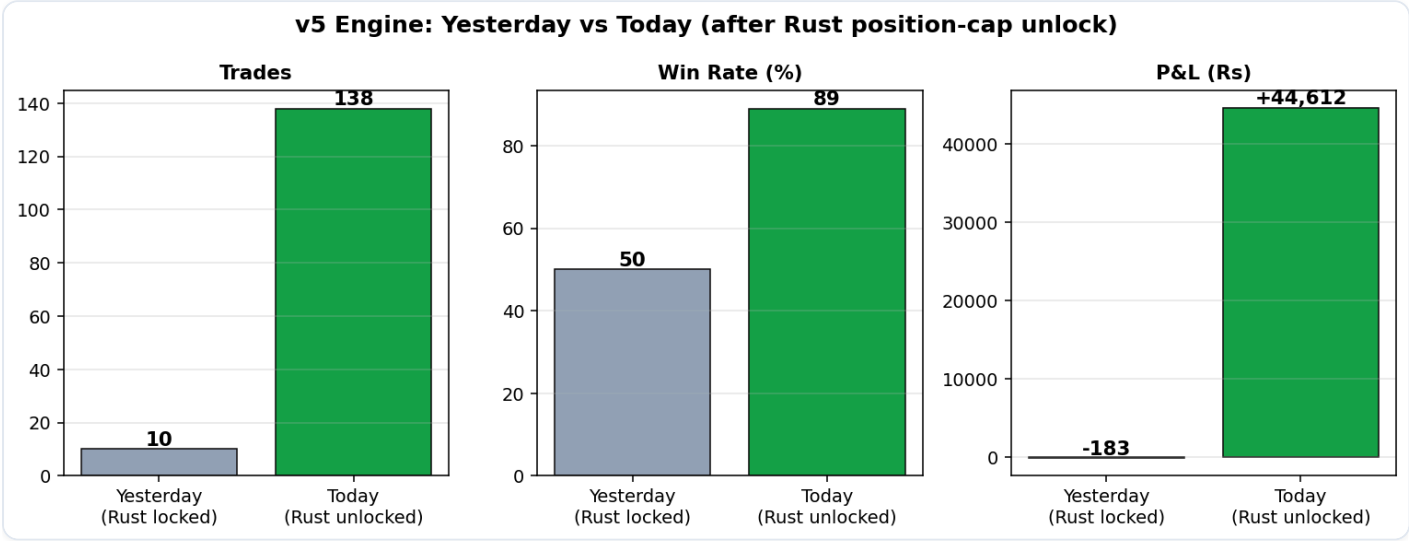

Rank	Engine	Net P&L	% Cap	Trades	Win %	Avg Win	Avg Loss
☠️	v5_2 (options)	Rs -45,385	-4.54%	1	0%	Rs +0	Rs -45,385

2. The Rust Unlock – Was Last Night's Fix Worth It?

Last night we externalised the Rust risk-engine position cap (was hardcoded at 30, now env-driven and raised to 150). v5 was the engine being throttled. Today's data answers: was the fix worth the work?

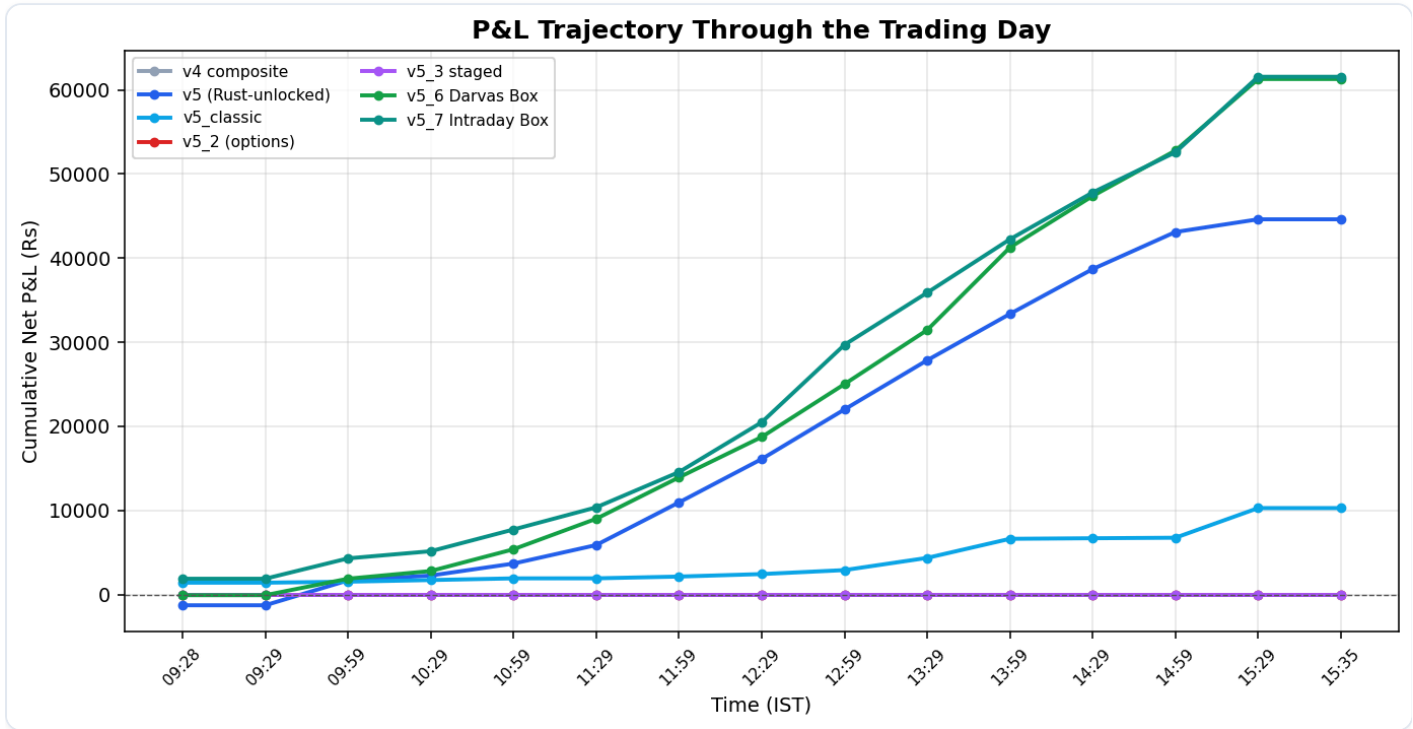

Verdict: Spectacular win. v5 went from 10 trades / Rs -183 yesterday to **138 trades / Rs +44,612 today** — a swing of **Rs +44,795** in 24 hours.

Metric	Yesterday (Rust locked)	Today (Rust unlocked)	Delta
Trades	10	138	+128 (13.8x)
Win Rate	50%	89%	+39 pts
Net P&L	Rs -183	Rs +44,612	Rs +44,795

3. P&L Trajectory – Who Pulled Ahead and When

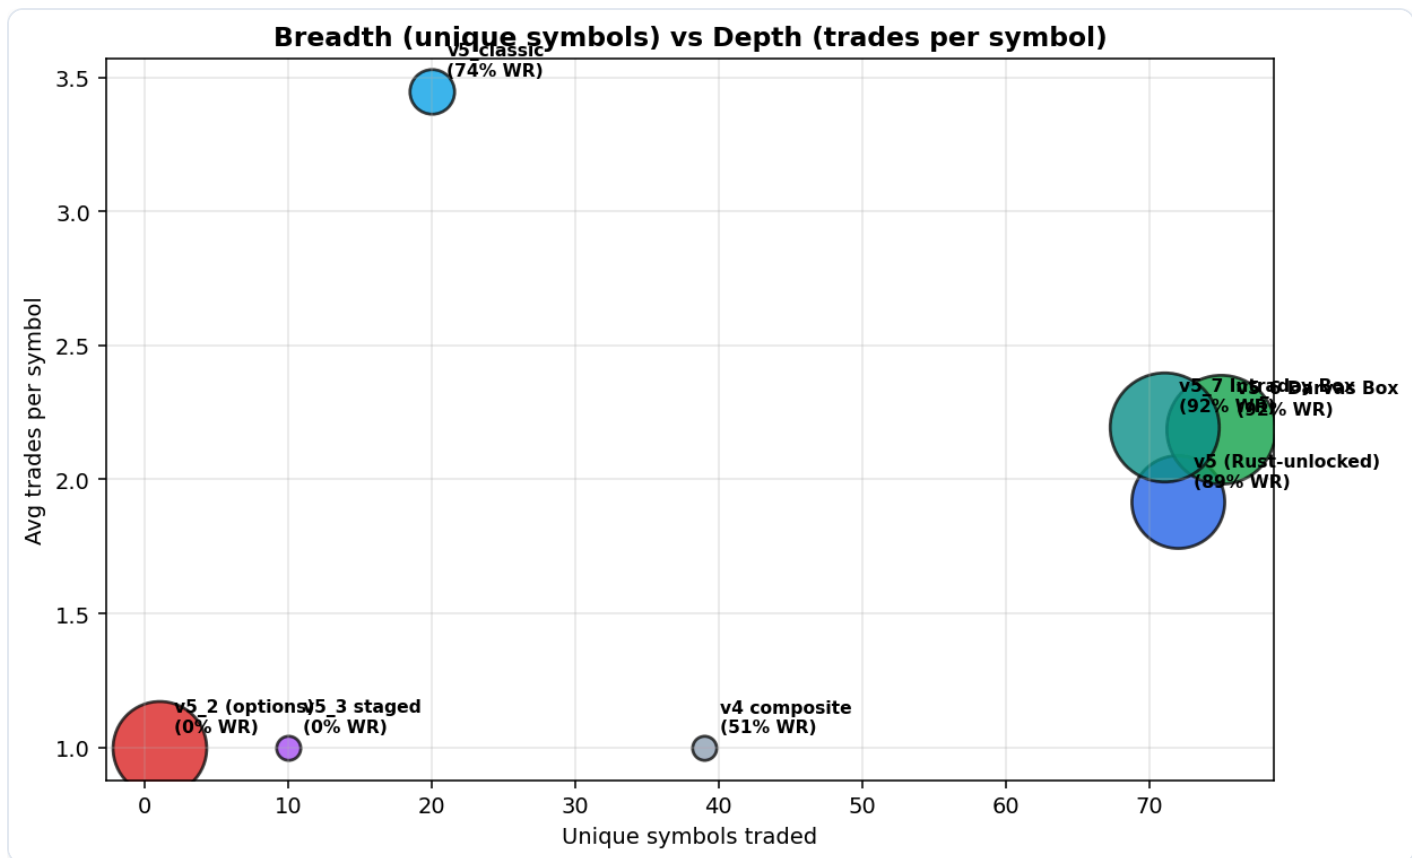

15 snapshots captured by the profit-watchdog from market open to close. The shape of each engine's curve tells you when its edge kicked in.

Notice v5_6 and v5_7 climb in near-lockstep all day — both run box-theory exits in a sideways market. v5 (blue) stays Rs 5-15K behind throughout, suggesting structural exit-precision gap, not a different opportunity set.

4. Why v5_6 and v5_7 Have an Edge Over v5

v5 had the **widest symbol coverage today (72 unique stocks)**. v5_6/v5_7 traded only 71 unique each but did 156-164 round-trips on them. v5 still finished Rs 16,940 behind the leader. **Breadth lost to depth.**

Aspect	v5 (Rust-unlocked)	v5_6 (Darvas Box)	v5_7 (Intraday Box)
Entry logic	ML score + tiered models	Find Darvas price box, buy at bottom	Mean reversion: buy oversold, sell overbought
Exit logic	Rust risk + signal flip (ML-driven)	Box top = mathematical target	Intraday box top = mathematical target
Best regime	Trending markets	Sideways markets ✓ today	Sideways markets ✓ today
Today's WR	89%	92%	92%
Today's P&L	Rs +44,612	Rs +61,284	Rs +61,552

The structural insight: Box theory gives you a mathematically defined exit (the box top). v5's ML-driven exit second-guesses the price action. In a sideways market, math beats opinion — that's why both box engines hit 92% WR while v5 sat at 89%.

Symbol overlap – where the engines agreed and disagreed

All three agreed (consensus):

ABB ADANIENSOL ADANIGREEN ADANIPOWER ASIANPAINT ATGL AUBANK BANKINDIA
CANBK CGPOWER COALINDIA CUMMINSIND DRREDDY ETERNAL EXIDEIND FORTIS
GAIL GODFRYPHLP GODREJCP GROWW HINDALCO HINDUNILVR HINDZINC ICICIAMC
IREDA JSWENERGY JUBLFOOD KPITTECH LODHA MANKIND MOTHERSON NATIONALUM
NESTLEIND NTPC OBEROIRLTY OFSS PIIND POLICYBZR RADICO RECLTD RVNL
SIEMENS SUPREMEIND SUZLON SWIGGY TATACONSUM TATAINVEST TECHM TIINDIA
UNIONBANK UNITDSPR VOLTAS

v5_6 + v5_7 agreed, v5 missed:

COLPAL GVT&D ICICIBANK IRFC JSWSTEEL SBIN TATAPOWER TRENT WAAREEENER

Only v5 (the Rust-unlocked exclusive plays — Adani group + mid-cap momentum):

BANKBARODA COCHINSHIP DLF IDFCFIRSTB INDUSTOWER ITC LENSART LICHSGFIN
MPHASIS PERSISTENT TATAELXSI

5. Why v4 Did NOT "Fail Completely"

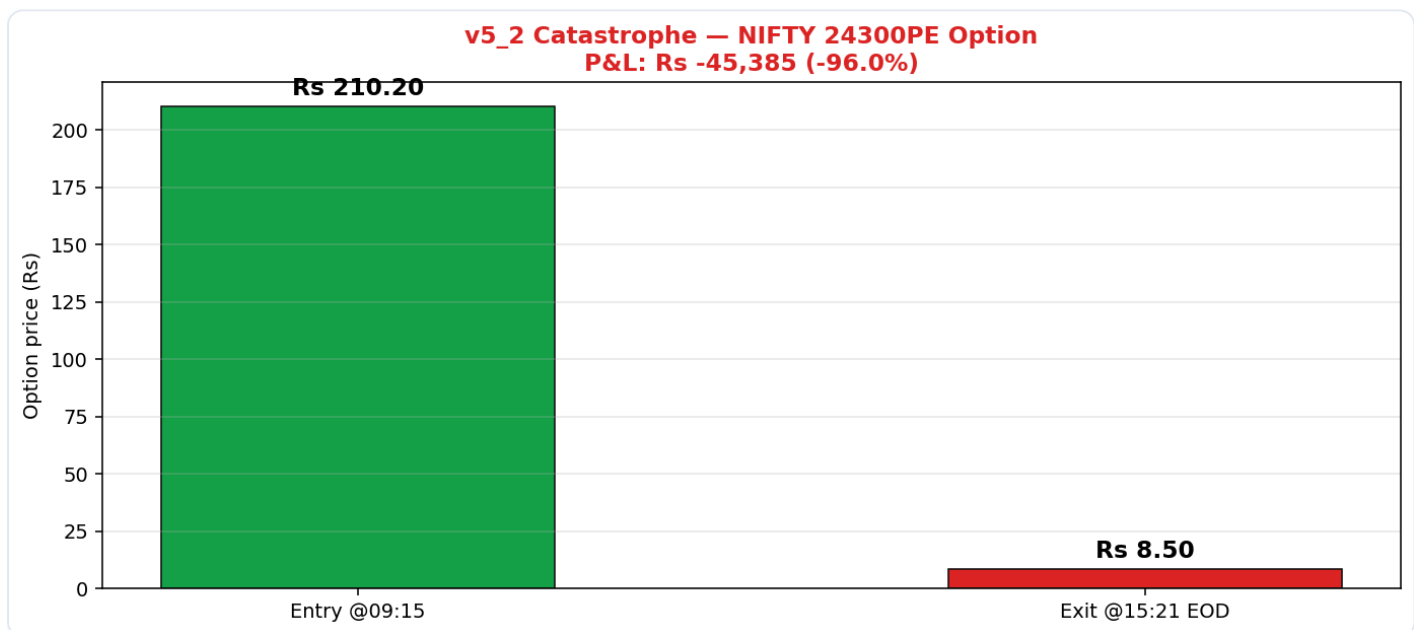

The morning snapshot suggested v4 was dead, but its actual report tells a different story:

Metric	v4 today	Diagnosis
Trades executed	39	Engine ran fine — scanned and traded all day
Win rate	51%	Coin flip. The composite scorer has no edge.
Net P&L	Rs -303	Wins and losses cancel out
Best trade	Rs +917	Decent
Worst trade	Rs -998	Bad — and balances the best

Real diagnosis: v4 isn't broken — it's *random*. 51% WR with cancelling P&L is what you'd get from coin flips. The composite scoring model dates from before the v5 generation; either retire v4 or retrain its model on the last 6 months of data.

6. The Real Disaster – v5_2 (Options Engine)

While the equity engines were quietly racking up wins, v5_2 made **one trade all day** — and lost Rs 45,385 on it.

What happened: v5_2 bought a NIFTY 24300PE put option in the morning, expecting a market crash. The market went sideways instead. The put option decayed to near-zero (entry Rs 210.20 → exit Rs 8.50 at EOD = -96%). Single bet wiped out **4.54% of v5_2's capital**.

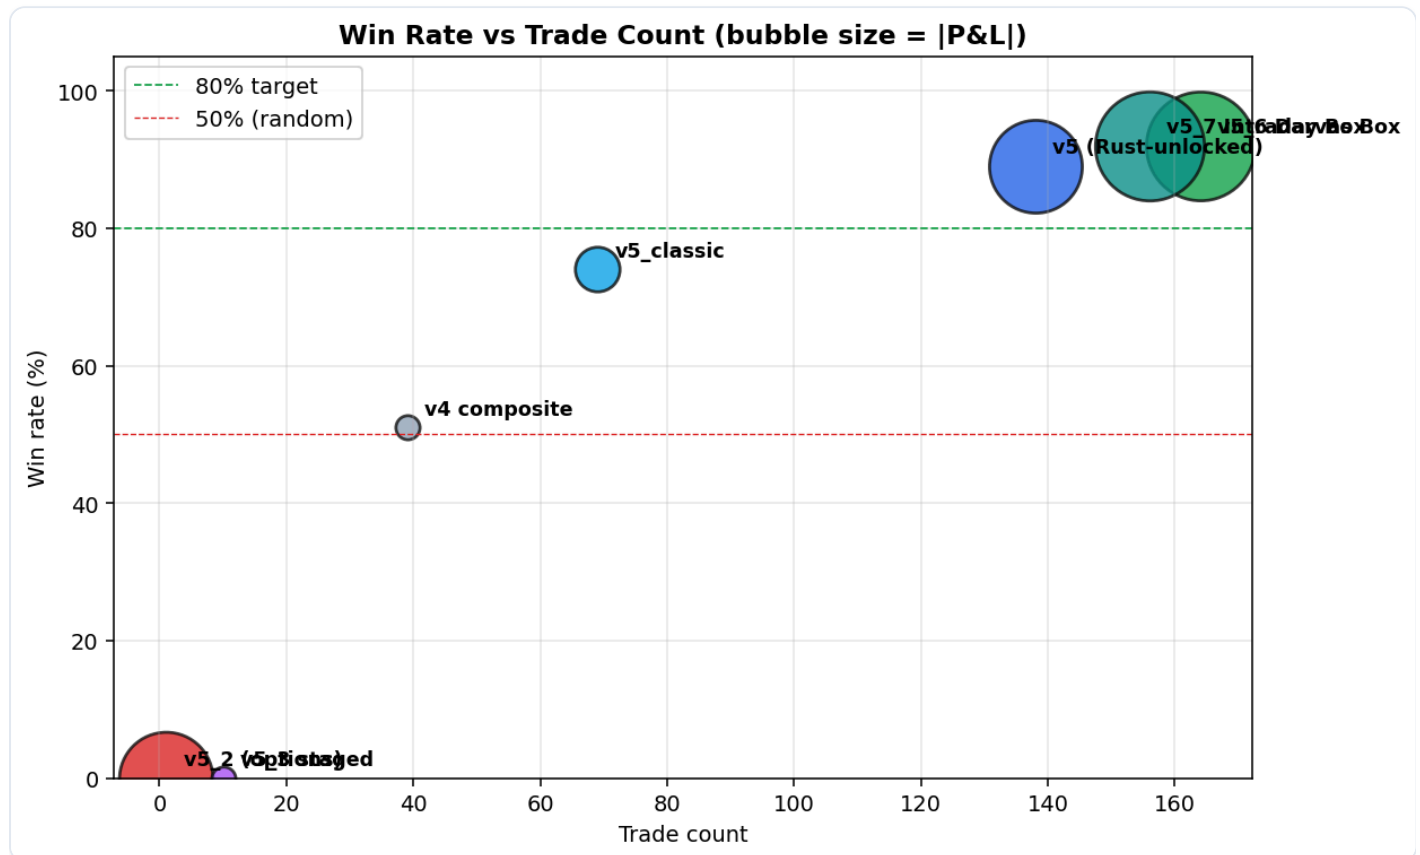

Containment > cleverness. One bad day for v5_2 wipes out v5_classic's entire profitable day. This is the #1 priority for tonight: cap position size + add a daily loss kill-switch.

7. Watchdog Findings – Where Money Was Left on the Table

A. Pool-cap saturation

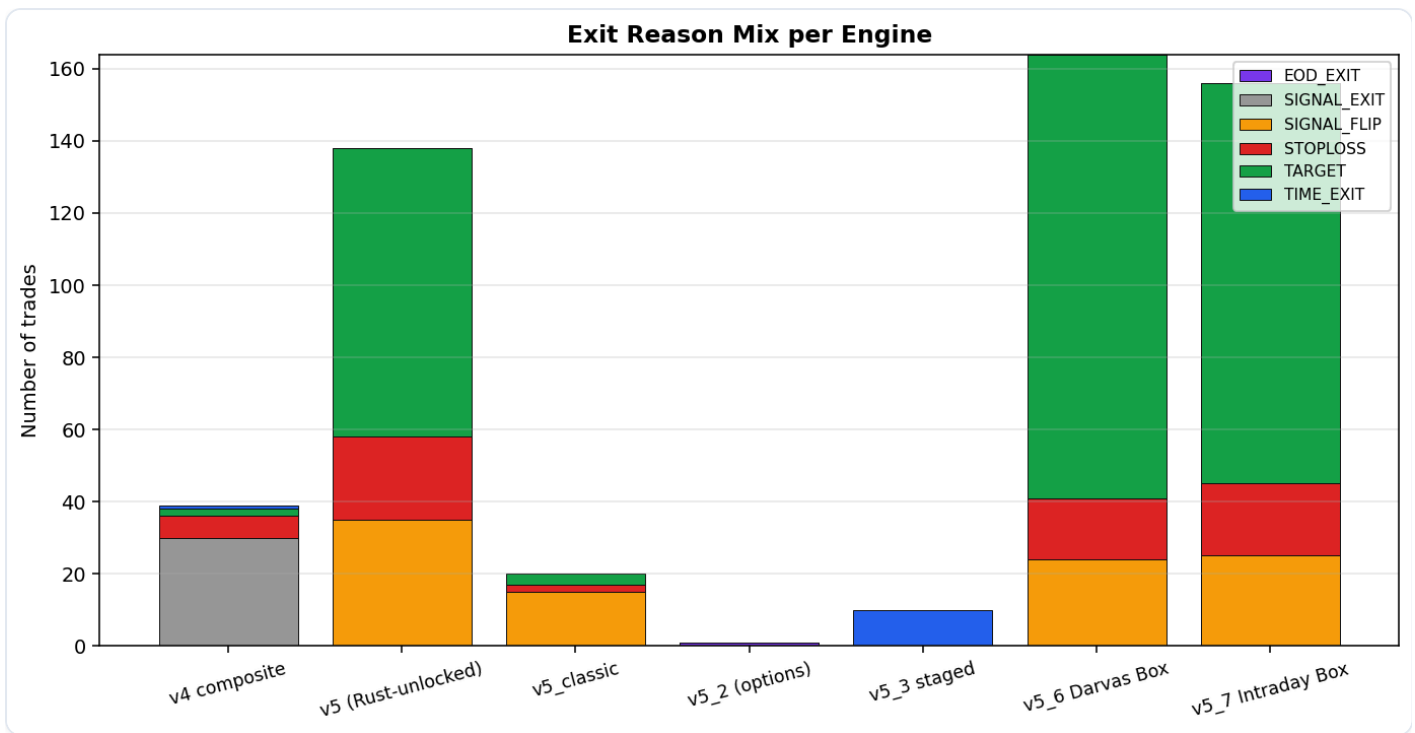

All top engines hit their **20-position pool cap** within 30-60 minutes of open. After that, new entries only happened when an old position closed. On a 92% WR day, raising the cap would compound profits.

B. Win-rate by trade count

The "highly profitable machine" zone is top-right: 80%+ win rate AND 100+ trades. Today v5_6 and v5_7 both landed there. v5 is climbing toward that zone — closing the WR gap is the next win.

C. Exit reason mix

Engines dominated by TARGET exits (green) are showing structural edge. Engines dominated by SIGNAL_FLIP or STOPLOSS need entry-quality work.

8. Tonight's Tune-Up Queue

Prioritised by impact and risk. Items 1-2 are tonight's must-dos. Items 3-5 are queued in docs/TONIGHT_TUNEUPS_2026-04-22.md.

PRIORITY 1 — CRITICAL

Cap v5_2 (options) position size + add daily loss kill-switch

Impact: Prevents single-trade losses like today's Rs -45,385

Risk: Low — purely protective

v5_2 lost Rs 45,385 on a single options bet. That's more damage than v5_classic made all day. Add: max 10% capital per trade + -Rs 5000 daily loss kill-switch.

PRIORITY 2 — HIGH

Diagnose & retire OR retrain v4 composite scorer

Impact: Frees CPU + capital. v4 has 51% WR = no edge.

Risk: Low

v4 traded 39× at 51% win rate (coin flip). Best trade Rs +917, worst Rs -998. The composite scorer model is stale or misconfigured.

PRIORITY 3 — HIGH

Port v5_7 Intraday Box's box-theory exits onto v5

Impact: Could close ~Rs 16,940 P&L gap to leader

Risk: Medium — needs paper-trade testing

v5 took 72 unique symbols (broader) but v5_7 Intraday Box hit 92% WR vs v5's 89% — the gap is exit precision, not entry quality. Box-theory targets are mathematically defined, not ML-second-guessed.

PRIORITY 4 — MED

Test raising pool position cap from 20 → 30

Impact: More trades on high-WR days. Symmetric on bad days.

Risk: Medium — backtest on bear/sideways/bull regimes first

All top engines hit the 20-position cap within 30-60 minutes of open and then could only enter new trades when old ones closed. On a 92% WR day more positions = more profit; on a -EV day, more positions = more loss.

Build Live Engine Picks widget (Part B from queue)**Impact:** Dashboard transparency — currently 87% of 'BUY'-rated stocks aren't held by any engine**Risk:** Low

See docs/TONIGHT_TUNEUPS_2026-04-22.md Parts B/D/E.
