Ops notes

- Kite token was DEAD at 07:40 (daily 06:00 expiry); unattended refresh cannot run because KITE_USER_ID/PASSWORD/TOTP_SECRET are not in .env. Refreshed by browser login via /kite/login at ~08:05, LIVE for the session.
- Only v5 and v5_wide wrote a day file. v5_swing, v5_daygain and v6 produced nothing for 2026-09-11, so the fleet was two engines. Regime-shadow sidecar and DAYGAIN baseline have no snapshots today.
- Agent Floor ran the full session (unlike 09-10, which died at 13:25). floor-eod: 1,717 escalations; SWEEP_RECLAIM is the only trigger with lift over random (+0.11pp, n=248); LEVEL_TOUCH and FAST_MOVE are noise. 140 shadow LONG entries recorded, none settled.
- 13 symbols were held by both v5 and v5_wide simultaneously (doubled exposure the book does not show).
- Phase 1 of the operator Terminal redesign merged to dev and went live on :5050 at 17:56 (stops/marks/unrealised P&L on /api/desk, /api/verdicts, /api/health/datalinks, /api/shadows, true model trained_at = 2026-04-07).
