Paper fleet: v5 + v5\_wide · Regime BEAR (30% allocation) · Gap -0.76% at open · Prepared by Sarathi for Soumya Swain

**Bottom line.** Combined gross **-Rs 1,224**, net of costs **-Rs 3,133**. Stop-losses were the whole story: 34 stop-outs cost Rs 2,465 across both engines, and 16 of them reversed our way after we were out, worth Rs 2,560 had we held. Realistic money left on the table today: **about Rs 2,560** (stops inside first-hour noise) plus **about Rs 2,364** gross on 11 BUY signals no engine took. The "perfect exit" ceiling is far higher (Rs 9,569) but is not a real target.

## 2. Left on the table – how it was measured

Every closed trade was replayed against Kite 5-minute candles fetched after the close. Three questions per trade: what would the P&L have been if we simply held to 15:15 (**hold delta**), which stop-losses reversed and went our way afterwards, and how far did price travel in our favour after we exited (**ceiling**). Trades exited at the 15:15 force-close have nothing after them and count as zero.

**Read-across.** v5's hold delta is **negative** (-Rs 358): as a whole its exits were right, the pain is concentrated in 10 stop-outs that reversed (+Rs 908). v5\_wide's hold delta is **positive** (+Rs 324) with 6 reversed stop-outs worth +Rs 1,651 – SRF, AEQUS and ZYDUSLIFE alone were Rs 1,432. Both engines were stopped on the same SRF short at 10:06 for a combined -Rs 950, and SRF then fell exactly as called. The stop is sitting inside 5-minute noise on the first hour.

## 3. BUY signals nobody took

62 dashboard BUYs at open; v5 entered 6, v5\_wide is not in the scorer's engine list. Of the 56 skipped: 11 rose more than 0.5% (wrong to skip), 21 fell more than 0.5% (right to skip), 22 flat. Average move of the skipped set -0.09%, so skipping was net neutral. The gross upside on the 11 wrong calls at v5's median position size (Rs 11,000) was:

#### Ops notes for tonight

- Kite token was refreshed manually at 07:42 (auto-login lacks password/TOTP in .env).
- 08:50 launchd run re-spawned both engines on top of the 07:42 manual launch – launch script gates dashboard/watchdogs but not engines. Harmless pre-open, fatal mid-session.
- missed-opps watchdog was blind from 08:50 to close: DNS resolution failed inside the process (getaddrinfo thread failed) plus SQLite "unable to open database file". Last good snapshot 08:43.
- 15:35 auto EOD report produced HTML but no PDF; same DNS failure hit its Telegram send. It also still lists v4/v5\_6/v6 and does not know v5\_wide.
- Legacy engine-comparison also cannot see v5\_wide – coverage stats above undercount it.
