EOD Scoreboard — Ranked by Net P&L

03 • TIMELINE

How the day *unfolded*.

Cumulative profit per engine through the trading session. 30-minute snapshots from the profit-watchdog. Where lines diverge, that's where the engines started disagreeing about the regime.

04 • EFFICIENCY

Trade volume *vs.* hit rate.

Bubble size is absolute P&L. Top-right of the plot — high win rate at high volume — is the engine you want to scale. Bottom-left is the one to retire or refactor.

Where the trades *ended*.

A useful diagnostic: an engine dominated by STOPLOSS exits is being stopped out by noise; an engine dominated by SIGNAL_EXIT is reading regime shifts; an engine dominated by TARGET is letting winners run.

Where engines *agreed*.

Symbols touched by two engines today, and the P&L gap between them. High overlap with very different outcomes points at the part of the logic that decides the trade.

PAIR	SHARED SYMBOLS	P&L GAP (A - B)	SAMPLE
v5 vs v5_classic	22	Rs -101	ADANIENSOL, ADANIPOWER, AXISBANK, BIOCON, COCHINSHIP, ENRIN...

Patterns the watchdog surfaced.

Auto-extracted observations from the day's data — starting points for the post-market review, not conclusions in themselves. Verify against the per-engine detail in section 08 before acting.

- Winner: **v5_classic** with Rs -881 across 32 trades (15.6% win).
- Laggard: **v5** with Rs -982 across 47 trades (34.0% win).
- v5**: STOPLOSS (7) >= TARGET (1). Consider widening SL or tightening entry filters.
- v5_classic**: STOPLOSS (6) >= TARGET (2). Consider widening SL or tightening entry filters.
- v5_classic**: dominated by SIGNAL_FLIP exits (12). Entries are noisy — filter signals more aggressively.
- v5**: 34.0% win rate (target 80%). Entry quality is the problem — tune ML score threshold up.
- v5_classic**: 15.6% win rate (target 80%). Entry quality is the problem — tune ML score threshold up.
