| Exit Type Breakdown

Exit Type	Count	Avg Loss
STOPLOSS	19	-1.72%
SIGNAL_EXIT	4	-1.05%
TIME_EXIT (3:15 PM)	14	-0.60%

| What Worked

1. **Stop-losses capped damage** – no single trade lost more than 3%. Without stops, losses would have been 2-3x worse
2. **JSWSTEEL picked correctly** – the only stock with significant upside (+1.27%) was in our BUY list
3. **Signal exits cut early** – 4 trades exited on BUY-to-AVOID signal flip, saving money
4. **UPL trailing stop** – activated at +1%, exited at near-breakeven instead of a loss

| What Failed

1. **No circuit breaker** – SHRIRAMFIN entered 4 times, lost Rs 11,217 total on one stock
2. **No regime detection** – Nifty -0.93%, VIX 20.4. Should have reduced size or paused
3. **Excessive re-entry** – 37 trades on a bear day. M&M, BAJFINANCE, ULTRACEMCO all entered 3x each
4. **ML signal too weak** – IC 0.03 barely contributing. Over-relied on momentum signals which all failed

| Fixes for Tomorrow

Fix	Impact	Effort
Circuit breaker: Pause after 5 consecutive losses	Saves Rs 15,000+ on days like today	1 hour
Max 1 re-entry per stock per day	Prevents SHRIRAMFIN 4x disaster	30 min
VIX-based sizing: If VIX > 18, reduce position size 50%	Halves loss on high-fear days	30 min
Morning trend check: If Nifty < -0.5% by 10 AM, go 50% cash	Avoids deploying into sell-off	30 min

Market Context

The entire Nifty 50 was red today. NIFTY dropped -0.93% with VIX at 20.4. This was not a day for aggressive intraday longs. Even professional traders would have struggled – the headwind was too strong.

If we had done nothing – Rs 0 loss. On bear days, the best trade is no trade.

Tomorrow's Plan

1. Add circuit breaker + max re-entry cap tonight
2. Run v4 with risk controls from market open
3. If Nifty opens gap-down or VIX > 20, start with 50% position sizes
4. Target: limit loss to <1% on bear days, capture 2-3% on bull days
