EOD Scoreboard — Ranked by Net P&L

How the day *unfolded*.

Cumulative profit per engine through the trading session. 30-minute snapshots from the profit-watchdog. Where lines diverge, that's where the engines started disagreeing about the regime.

Trade volume *vs.* hit rate.

Bubble size is absolute P&L. Top-right of the plot — high win rate at high volume — is the engine you want to scale. Bottom-left is the one to retire or refactor.

Where the trades *ended*.

A useful diagnostic: an engine dominated by STOPLOSS exits is being stopped out by noise; an engine dominated by SIGNAL_EXIT is reading regime shifts; an engine dominated by TARGET is letting winners run.

Where engines *agreed*.

Symbols touched by two engines today, and the P&L gap between them. High overlap with very different outcomes points at the part of the logic that decides the trade.

No overlap data.

Patterns the watchdog surfaced.

Auto-extracted observations from the day's data — starting points for the post-market review, not conclusions in themselves. Verify against the per-engine detail in section 08 before acting.

- Winner: **v5** with Rs +2,585 across 47 trades (57.4% win).
- v5**: STOPLOSS (14) >= TARGET (4). Consider widening SL or tightening entry filters.
- v5**: 57.4% win rate (target 80%). Entry quality is the problem — tune ML score threshold up.
