# TradePilot – Two-Day Comparison + Stock-Wise Detail: 07-01 vs 07-02

Two near-identical green days, engines still losing – the comparison, the reasons, the continued regime picture, and full stock-wise trade data (entry/exit times, counts, per-stock P&L).

|                                  |                                                                                                                    |
|----------------------------------|--------------------------------------------------------------------------------------------------------------------|
| <b>Project</b>                   | TradePilot (NSE intraday, paper)                                                                                   |
| <b>Sessions</b>                  | 2026-07-01 (Tue, NIFTY +0.45%) vs 2026-07-02 (Wed, NIFTY +0.47%)                                                   |
| <b>Both</b>                      | Green days – near-identical tapes                                                                                  |
| <b>Focus engine (stock-wise)</b> | v5 (live)                                                                                                          |
| <b>Note</b>                      | Conviction <a href="#">score</a> now logged on closed trades (fix 2026-06-30) – first real conviction→outcome data |
| <b>Author</b>                    | Soumya Swain                                                                                                       |
| <b>Email</b>                     | soumya@sidewall.in                                                                                                 |

## 1. The regime picture so far (continued)

Across four recent sessions the engine has lost in **every** regime – for the *same* underlying reason: **it never tilts its direction to the tape.**

| SESSION | TAPE           | WHY IT LOST                                                       |
|---------|----------------|-------------------------------------------------------------------|
| 06-30   | Hard→mild-down | Long-heavy; shorts couldn't offset; longs recovered late          |
| 07-01   | Green +0.45%   | <b>Shorts bled into strength; longs churned</b>                   |
| 07-02   | Green +0.47%   | <b>Shorts bled into strength; longs caught the green (better)</b> |

The engine runs a near-fixed ~45% short book regardless of tape, so it is always fighting the market *somewhere*. The two green days below isolate the pattern cleanly.

## 2. Two-day net comparison

| ENGINE     | 07-01          | 07-02          | Δ       |
|------------|----------------|----------------|---------|
| v5 (live)  | −₹3,605        | −₹1,211        | +₹2,394 |
| v5_classic | −₹2,375        | <b>+₹256</b>   | +₹2,631 |
| v5_long    | −₹331          | +₹24           | +₹355   |
| v5_cut     | <b>+₹1,003</b> | <b>−₹1,977</b> | −₹2,980 |
| v5_flip    | −₹1,105        | −₹67           | +₹1,038 |

### Long vs short attribution

| ENGINE     | 07-01 LONG | 07-01 SHORT   | 07-02 LONG    | 07-02 SHORT   |
|------------|------------|---------------|---------------|---------------|
| v5         | −1,320     | <b>−2,285</b> | +11           | <b>−1,222</b> |
| v5_classic | −645       | −1,730        | <b>+1,304</b> | −1,048        |
| v5_cut     | +297       | +706          | +820          | <b>−2,797</b> |
| v5_flip    | −1,095     | −11           | <b>+1,587</b> | −1,655        |

## 3. The reasons – three findings

**Reason 1 – shorts bled on *both* green days (the constant).** Every engine's short book was red on both days. Shorting into a rising tape loses, period. Suppress shorts on green → both days improve.

**Reason 2 – longs are the swing, and they're execution-dependent.** 07-01 longs churned (red); 07-02 longs caught the green (classic +1,304, flip +1,587), lifting every engine +₹2,400-2,600. The tell: **v5\_classic's clean-execution longs made +1,304 on 07-02, while v5\_long's longs (same direction, v5's churny execution) made only +24.** Clean early-entry catches the green; churn doesn't.

**Reason 3 – v5\_cut's reversal shows n=1 fragility.** It went best (+1,003) → worst (−1,977) on two identical green days, entirely via its shorts (+706 → −2,797). No short-gate is safe on a green day; *not shorting a confirmed up-tape* is more robust than shorting carefully.

## 4. Stock-wise trade detail – v5 (live)

### 4.1 Trade counts

|                                        | 07-01                                                        | 07-02 |
|----------------------------------------|--------------------------------------------------------------|-------|
| Closed trades                          | 77                                                           | 69    |

### 4.4 Patterns from the trade-level data

★ **Insight** — The entry/exit times + the newly-logged scores reveal three concrete patterns that the aggregates hide:

- **The killer shorts all fired at the 09:06 open and stopped out within 10-20 min.** DABUR, HINDUNILVR, TORNTPHARM (07-01) and TATASTEEL, BLUESTARCO (07-02) – shorted at the open on the green tape, stopped by 09:26. *Shorts opened at the bell on an up-day are the worst trades in the book.*
- **The winning shorts held for hours.** SAIL (330m), GLENMARK (338m), BANKBARODA (195m→TARGET) – the shorts that worked were held long, not stopped fast. Fast-stop = loss, long-hold = win, on the short side.
- **The conviction score IS informative (first look).** The big-loss shorts scored **28-34**; the winning longs scored **80+** (PRESTIGE 80.2, ETERNAL 80.5, GODREJPROP 80.7). Score cleanly separates direction (high→long, low→short), and the low-score-short + open-entry combo is the systematic loser. *This is exactly the data we couldn't correlate before the 06-30 logging fix – now we can.*
- **Churn is visible per-stock:** DABUR on 07-01 was shorted (score 28.9, -756) and longed (score 75.8, -217) – the engine flipped its own view within 30 min and lost on both. COROMANDEL the same (LONG -320, SHORT -300).

## 5. Full per-stock P&L – 07-01 (v5, notable movers)

| STOCK      | TRADES (L/S) | NET  |
|------------|--------------|------|
| DABUR      | 3 (L2/S1)    | –976 |
| HINDUNILVR | 1 (S1)       | –624 |
| COROMANDEL | 2 (L1/S1)    | –619 |
| TORNTPHARM | 1 (S1)       | –416 |
| LICHSGFIN  | 2 (L1/S1)    | –307 |
| SAIL       | 1 (S1)       | +252 |
| FEDERALBNK | 1 (L1)       | –242 |
| ASIANPAINT | 1 (S1)       | –202 |
| GLENMARK   | 1 (S1)       | +190 |
| ENRIN      | 2 (L1/S1)    | +185 |
| CHOLAFIN   | 1 (S1)       | –178 |
| SOLARINDS  | 1 (L1)       | –157 |
| MFSL       | 1 (S1)       | –157 |

(Remaining 43 symbols each netted between –112 and +97; full list in the source JSON.)

## 6. Full per-stock P&L – 07-02 (v5, notable movers)

| STOCK      | TRADES (L/S) | NET  |
|------------|--------------|------|
| BANKBARODA | 2 (S2)       | +390 |
| PRESTIGE   | 1 (L1)       | +381 |
| LT         | 1 (S1)       | +378 |
| PAYTM      | 1 (L1)       | +302 |
| MCX        | 1 (L1)       | −285 |
| ETERNAL    | 1 (L1)       | +277 |
| TATASTEEL  | 1 (S1)       | −272 |
| HINDPETRO  | 1 (L1)       | −247 |
| BLUESTARCO | 2 (S2)       | −239 |
| GODREJPROP | 1 (L1)       | +230 |
| CGPOWER    | 1 (S1)       | −204 |
| CUMMINSIND | 1 (S1)       | −197 |
| HEROMOTOCO | 1 (S1)       | −180 |

(Remaining 45 symbols each netted between −175 and +157; full list in the source JSON.)

## 7. Conclusions & the two fixes this points to

1. **Suppress shorts on a confirmed green tape (the BULL-side tilt).** Shorts bled both green days; the worst were opened at the bell. `v5_flip` handles the BEAR side only – it needs the mirror. *This is the highest-conviction fix across three sessions now.*
2. **Rebuild toward v5\_classic's clean-execution longs.** The two-day gap proves clean early-entry longs catch the green while churning execution doesn't. Also fold `v5_cut`'s tighter short-gate into live v5 as the cheap, partly-validated interim.
3. **Use the now-logged conviction score.** The 06-30 fix means we can finally test whether score→P&L holds. First look: low-score shorts opened at the bell are the systematic loser – a candidate rule (don't open low-score shorts in the first 15 min of a green tape).
