TradePilot – Detailed EOD Report + Full Watchdog Findings: 2026-06-30

Everything found today – the full intraday trajectories, every watchdog's complete output, the long/short attribution evolution, exit-reason and trade-quality fields, the cost analysis, and the findings – embedded so nothing is lost.

Project	TradePilot (NSE intraday, paper)
Session	2026-06-30 (Tuesday) – a mild-down red day
Tape	NIFTY 24,032 open → ~-0.5% close; brief -0.73% morning dip, recovered to -0.23%, no afternoon green reversal
Regime tag (engine)	SIDEWAYS all day
Active roster	v5 · v5_classic · v5_long · v5_cut (v5_flip applies next launch)
Watchdogs run	red-day · profit · missed-ops · EOD-profile · engine-compare
Author	Soumya Swain
Email	soumya@sidewall.in

1. Result – five-way, net and gross

ENGINE	NET P&L	GROSS P&L	COST	TRADES	WR	L/S
v5_long (long-only)	-₹872	—	—	48	52%	L48 / S0
v5_cut	-₹1,470	—	—	58	50%	L20/S38
v5_classic (frozen)	-₹2,161	-₹2,161*	(gross-reported)	58	48%	L18/S40
v5 (live)	-₹2,303	-₹1,181	-₹1,122	77	44%	L31/S46
v5_flip	not run (next launch)	—	—	—	—	—

* v5_classic reports gross (no cost field); v5 reports both. **Key live finding:** on a *gross* basis v5's picks were the *best* of the day (-₹1,181, better than classic's -₹2,161) – but v5 **over-traded (77 trades)** and **₹1,122 of transaction cost** flipped it to the *worst* net (-₹2,303). The over-trading tax from the root-cause investigation, visible in a single session.

Cumulative (last 8 sessions, net): v5_classic **+₹7,959** (leads) · v5_cut +₹6,159 · v5 -₹1,916 · v5_long -₹3,566 · v5_flip ₹0 (pending).

2. NIFTY intraday path (30-min, verified)

IST TIME	NIFTY	VS OPEN
09:00 (open)	24,032	—
09:00-09:30	~23,897-23,918	-0.56% to -0.47%
~10:30-11:00	~23,977	-0.23% (recovery high)
11:30-13:00	~23,933-23,946	-0.36% to -0.42%
13:30-14:30	~23,935	-0.40%
14:30-15:00	~23,905-23,952	-0.33% to -0.53%
Close	~23,905	~-0.5%

Mild-down, choppy, never green, never sustained past -0.64%. The brief morning -0.73% touch is what matters for the v5_flip trigger analysis (§9).

3. Profit-watchdog – 30-min P&L trajectory (the day's shape)

TIME	V5	V5_CLASSIC	NOTE
09:20	+₹180 (1t, 100%)	₹0	green open
09:50	–₹1,174 (8t, 25%)	–₹1,879 (7t, 14%)	morning bleed begins
10:20	–₹1,424 (10t)	–₹2,129 (9t)	
10:50	–₹2,173 (21t)	–₹2,950 (20t)	
11:50	–₹2,448 (25t)	–₹3,176 (26t)	
12:20	–₹2,776 (27t)	–₹3,444 (31t)	midday low
12:50	–₹2,659 (31t)	–₹3,313 (33t)	
13:50	–₹2,647 (50t)	–₹3,348 (34t)	
14:20	–₹2,650 (53t)	–₹3,046 (36t)	recovery starting
14:50	–₹2,728 (55t)	–₹3,000 (37t)	
15:20	–₹1,181 (77t, 44%)	–₹2,161 (58t, 48%)	strong late recovery

The arc: green open → bled to a **midday low** (~–₹2,800 v5 / –₹3,400 classic at 12:20) → choppy afternoon → **strong final-30-min recovery** (v5 +₹1,547 from 14:50→15:20; classic +₹839). The longs recovered late – the 2nd-half effect, live.

4. Red-day watchdog – long/short attribution evolution

The new watchdog (built today) tracked every 5 min. Key snapshots showing how the **shorts decayed** while longs stayed the bleed:

TIME	NIFTY	V5 LONG	V5 SHORT	V5_CLASSIC SHORT
09:50	–0.73%	–1,671 (17t)	+497 (10t)	+497 (10t)
10:15	–0.61%	–1,671	+247 (13t)	+247
10:35	–0.56%	–1,980	+47 (13t)	+40
12:00	–0.42%	–2,210 (23t)	–238 (20t)	–115 (27t)
15:21 (EOD)	–0.47%	–1,097 (37t)	–84 (46t)	+424 (40t)

Reading: the shorts were green in the morning (+₹497) and **decayed through the day** to roughly flat/red as NIFTY chopped sideways and recovered. v5_classic's shorts ended green (+₹424) on a more concentrated book; v5's shorts ended slightly red (–₹84). The morning "shorts are green, flip short" signal **faded** – exactly why the morning panic-flip would have backfired.

EOD long/short split (15:21), all four engines:

ENGINE	LONG	SHORT	NET
v5	-1,097 (37t)	-84 (46t)	-2,303
v5_classic	-2,585 (19t)	+424 (40t)	-2,161
v5_long	-221 (63t)	0	-872
v5_cut	-910 (27t)	+146 (38t)	-1,470

The red-day watchdog also fired its **one-shot Telegram REGIME-MISMATCH alert** at 09:50 (red tape, shorts green, long-heavy).

5. EOD-profile watchdog – full trade-quality fields

FIELD	V5	V5_CLASSIC
Total P&L (gross)	-₹1,181	-₹2,161
Trades / Wins / Losses	77 / 34 / 43	58 / 28 / 30
Win rate	44.2%	48.3%
Longs / Shorts	31 / 46	18 / 40
Best trade	+₹869.2	+₹869.2
Worst trade	-₹1,029.6	-₹1,123.2
Avg win	+₹108.82	+₹92.05
Avg loss	-₹116.20	-₹157.97
Open at EOD	6	1

Negative payoff ratio both engines: avg loss > avg win (v5 -116 vs +109; classic -158 vs +92). At a sub-50% win rate, a negative payoff ratio *guarantees* a red day – the structural reason today was red.

Exit-reason breakdown:

ENGINE	TARGET	STOPLOSS	FLAT_FORCE	TIME_EXIT	SIGNAL_FLIP
v5	2	31	17	14	13
v5_classic	1	29	–	19	9

v5 took 77 trades and hit TARGET only **twice** – the same low-target-hit pattern as the whole root-cause window. v5_classic holds more to TIME_EXIT (19) and churns less (no FLAT_FORCE).

6. Missed-opportunities watchdog

By close the book was **flat – 0 winners held, 0 losers held, 0 missed gainers >3%, 0 on-table >2%** (the intraday engines force-flatten by EOD). No major opportunity left on the table at the close.

7. Findings

7.1 Validating – mild-down favours longs; the morning “flip short” call was correctly walked back

Validation 3 (per-trade by severity) said mild-down days favour longs for v5 (+₹123/trade vs +₹11 shorts). Today confirmed it precisely: **v5_long (all-long) was the least-bad engine, its longs only –₹221**, while the short-heavy engines (S38-S46) all lost more net. Shorts were green on a couple of engines but decayed all day and couldn't offset the long damage on the concentrated books. **Flipping short-heavy at 09:48 would have deepened the loss** – the disciplined “hold longs, don't panic-flip” read (Sarathi Rule 2) was correct.

7.2 The over-trading tax – live

v5's gross P&L (–₹1,181) was the **best** of the day, but its **77 trades** cost **₹1,122** and flipped it to the **worst** net (–₹2,303). The over-trading drag from the root-cause investigation, demonstrated in one session.

7.3 The 2nd-half recovery – live

Both engines hit their low at midday (~12:20) and **recovered strongly in the final 30-45 min** (v5 +₹1,547, classic +₹839). The longs that bled in the morning recovered late – consistent with the “2nd-half is where the profit/recovery is” validation, and another reason a morning panic-flip is wrong.

7.4 Complicating – a v5_flip trigger flaw caught before launch

The morning briefly hit –0.73% (past the –0.6% hard-down trigger), so v5_flip *would* have flipped to BEAR. But NIFTY recovered to mild-down (–0.5%) and **never went green**, so v5_flip's revert condition (needs NIFTY ≥ +0.15%) would **never fire** – it would sit short-heavy all day on a longs-favoured day. **Fix needed before live:** revert to baseline on “back above –0.6% / above VWAP”, not require full green. No backtest caught this – the validations bucketed days by their *close*, hiding the intraday spike-then-recover path. The A/B shadow surfaced it with zero capital at risk.

7.5 n=1 confirmed

v5_long was the *worst* engine yesterday (06-29) and the *best* today (06-30) – opposite rankings on consecutive days. Single sessions are noise; judge on the full window.

8. Cumulative standings (8 sessions)

ENGINE	CUMULATIVE NET
v5_classic (frozen)	+₹7,959
v5_cut	+₹6,159
v5 (live)	-₹1,916
v5_long (RC-1)	-₹3,566
v5_flip	₹0 (pending)

The frozen original continues to lead. The live rebuild and the long-only experiment both lag.

9. Next steps (no action taken – owner decides)

1. **Patch v5_flip's revert logic** (revert when NIFTY climbs back above -0.6% / above VWAP, not only on full green) before it goes live – today's exact edge case.
2. **Address the over-trading tax** – v5's 77 trades / ₹1,122 cost vs the win it gave up; trade-count reduction is the cheapest lever.
3. **Keep watching the window** – v5_classic's cumulative lead and the now-logging conviction data are the threads that decide the strategy, not one red day.
