EOD Scoreboard — Ranked by Net P&L

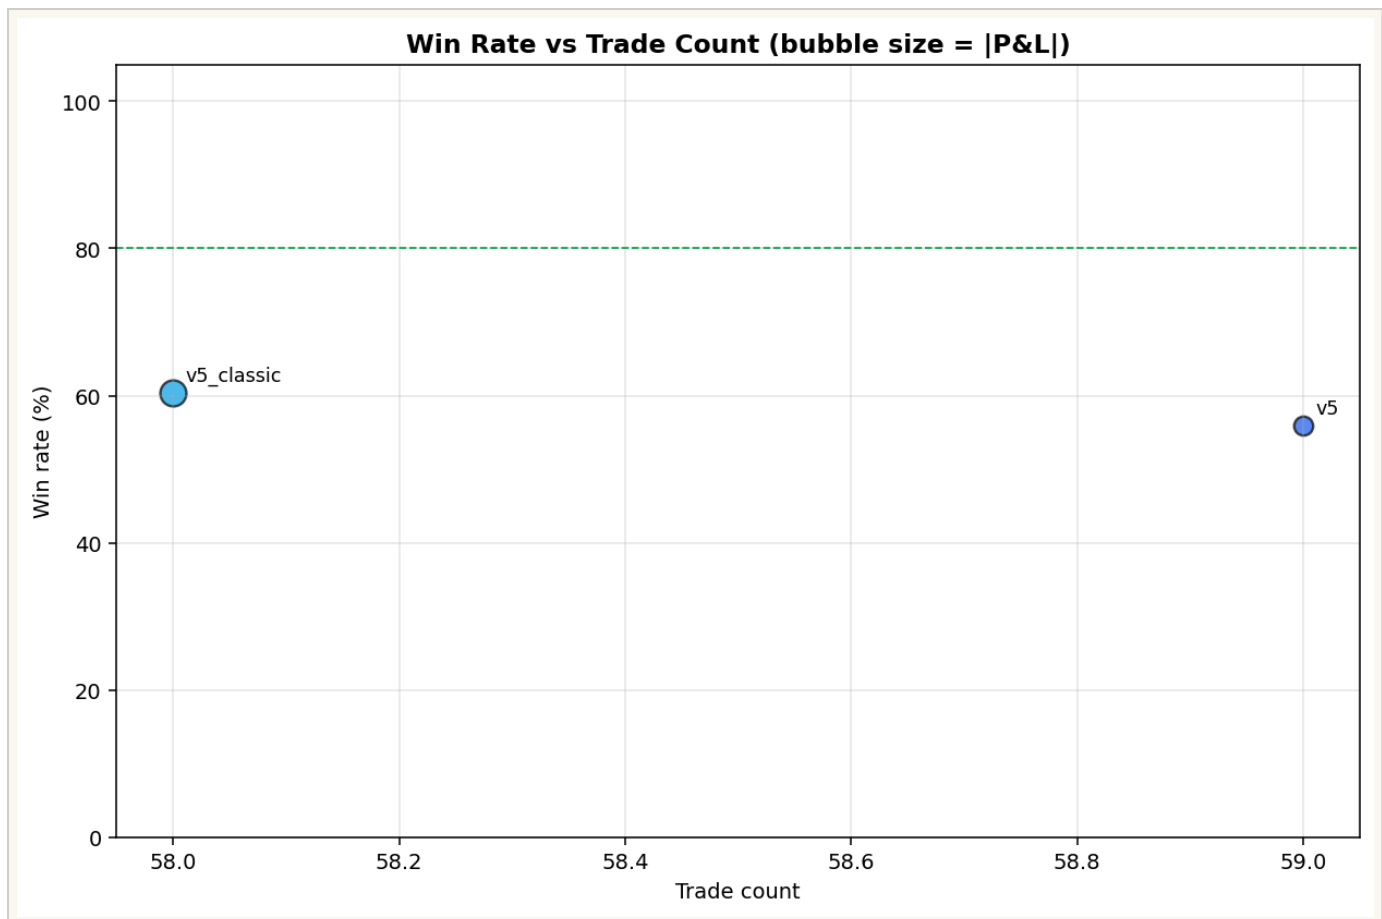

How the day *unfolded*.

Cumulative profit per engine through the trading session. 30-minute snapshots from the profit-watchdog. Where lines diverge, that's where the engines started disagreeing about the regime.

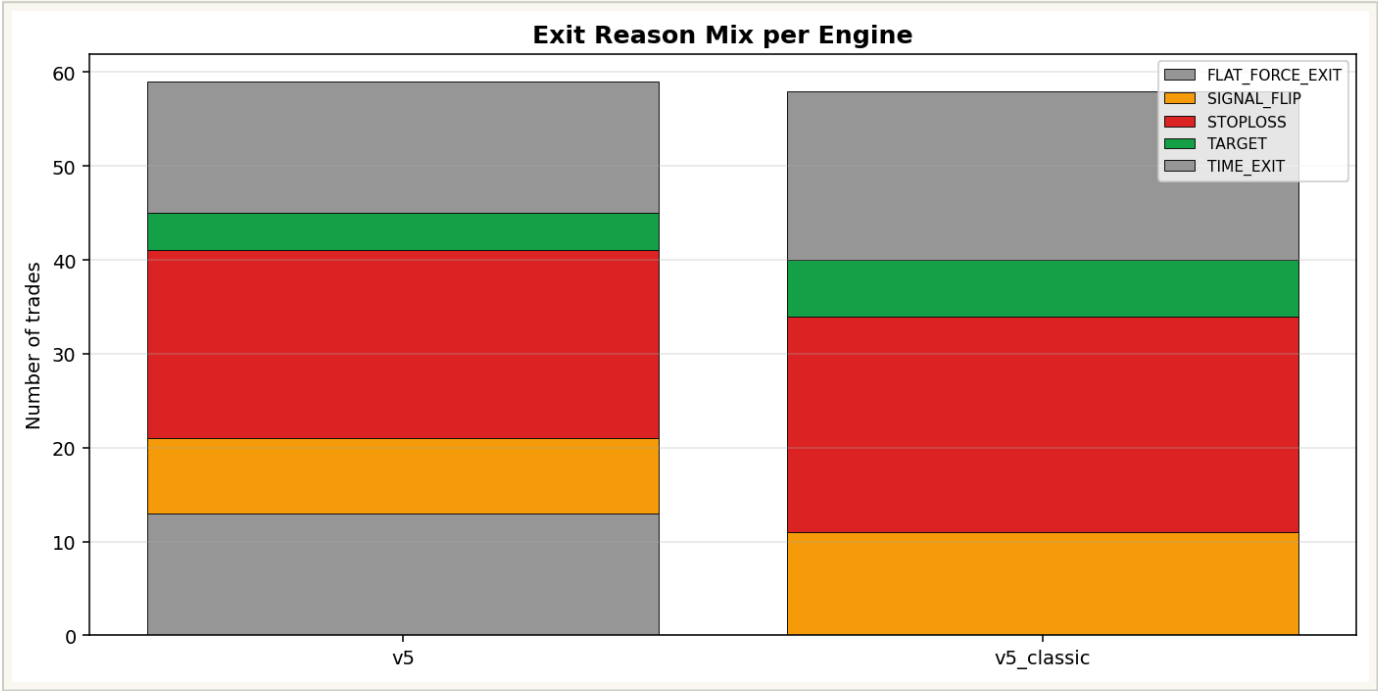

Trade volume *vs.* hit rate.

Bubble size is absolute P&L. Top-right of the plot — high win rate at high volume — is the engine you want to scale. Bottom-left is the one to retire or refactor.

Where the trades *ended*.

A useful diagnostic: an engine dominated by STOPLOSS exits is being stopped out by noise; an engine dominated by SIGNAL_EXIT is reading regime shifts; an engine dominated by TARGET is letting winners run.

Where engines *agreed*.

Symbols touched by two engines today, and the P&L gap between them. High overlap with very different outcomes points at the part of the logic that decides the trade.

PAIR	SHARED SYMBOLS	P&L GAP (A - B)	SAMPLE
v5 vs v5_classic	39	Rs -2,117	ABB, ABCAPITAL, ADANIGREEN, ADANIPOWER, AMBUJACEM, AUROPHARMA...

Patterns the watchdog surfaced.

Auto-extracted observations from the day's data – starting points for the post-market review, not conclusions in themselves. Verify against the per-engine detail in section 08 before acting.

Winner: **v5_classic** with Rs +4,538 across 58 trades (60.3% win).

Laggard: **v5** with Rs +2,421 across 59 trades (55.9% win).

v5: STOPLOSS (20) >= TARGET (4). Consider widening SL or tightening entry filters.

v5_classic: STOPLOSS (23) >= TARGET (6). Consider widening SL or tightening entry filters.

v5: 55.9% win rate (target 80%). Entry quality is the problem – tune ML score threshold up.
