Day 3 -- 4-Engine Evaluation

April 13, 2026

BEST ENGINE

v5

DAY P&L

+14,303

WIN RATE

86%

REGIME

BEAR

NIFTY 50

-0.95%

INDIA VIX

20.5

A/D RATIO

5.5%

3-DAY LEADER

+54,783

Soumya Swain | soumya@devpilot.co.in

Market Context

BEAR -4/6

NIFTY 23,822 (-0.95%) | SENSEX 76,706 (-1.09%) | VIX 20.5 | FII -1,039 Cr | A/D 5.5%

INDICATOR	VALUE	SIGNAL
NIFTY 50	23,822 (-0.95%)	Bearish
SENSEX	76,706 (-1.09%)	Bearish
India VIX	20.5 (elevated)	Fear
Pre-market Gap	-1.90%	Gap Down
FII Flow	-1,039 Cr	Selling
S&P 500	-0.1%	Neutral
Asia	-1.2%	Weak
A/D Ratio	5.5%	Extreme fear

A brutal bear day. Nifty fell nearly 1%, FIIs were net sellers, and the advance-decline ratio hit 5.5% -- only 1 in 18 stocks closed green. The kind of day that separates adaptive engines from rigid ones.

4-Engine Results

v4: Equity Engine (Legacy)

INACTIVE

Rs 0

Trades: 0 Win Rate: N/A

VIX sizing reduced capital to 50%, but BEAR regime meant zero BUY signals crossed the threshold. Sat in 100% cash all day. **Too scared.** Cannot short, cannot rotate sectors, cannot adapt. Dead on bear days.

v5: Multi-Pool Engine

DAY WINNER

Rs +14,303

Trades: 93 Wins: 80 Losses: 13 Win Rate: 86% Capital: 30%

The standout performer. SWING pool found **16 stocks going UP** while Nifty dropped. Sector rotation -- energy, metals, infrastructure rallied while the broader market fell.

VOLTAS

NTPC

VEDL

ONGC

COALINDIA

BLUESTARCO

MCX

ADANIPOWER

OIL

WAAREEENER

v5.2: F&O Engine WORST DAY

Rs -56,180

Trades: **2** Wins: **0** Losses: **2** Win Rate: **0%**

Bought protective puts: NIFTY 23550PE at Rs 104 and NIFTY 23500PE at Rs 102. Both expired nearly worthless -- exited at Rs 9 each **(-91% loss)**. Market only dropped -0.95%, not enough for puts to pay off. VIX at 20.5 made options expensive.

v5.2 Lesson Learned

Don't buy puts when VIX > 18 -- options are already expensive with fear priced in. Puts work when VIX is LOW and you expect it to spike. On high-VIX days, sell premium (straddle/strangle selling) instead.

v5.3: Precision Engine NO ACTION

Rs 0

Trades: **0** Signals: **20 generated, 20 cancelled**

All 20 signals classified as Tier 2 (need ORB + volume confirmation). None confirmed -- volume was 0.0x to 0.4x of 20-day average. Every signal cancelled:

"low volume (0.0x < 1.2x threshold)"

Ultra-conservative. Correct in principle but missed Rs 14,303 that v5 captured. Volume threshold (1.2x) is too strict for bear days.

3-Day Cumulative Scorecard

ENGINE	DAY 1 (BEAR)	DAY 2 (BULL)	DAY 3 (BEAR)	TOTAL
v4	-30,816	+11,537	0	-19,279
v5	0	+40,480	+14,303	+54,783
v5.2	0	0	-56,180	-56,180
v5.3	0	0	0	0

v5 leads v4 by Rs 74,062 over 3 days

Consistent performance across both bull and bear regimes. v5.2 needs major recalibration. v5.3 hasn't traded yet -- too conservative to generate a confirmed signal.

Watchdog Report Findings

Analysis from April 12 watchdog run, validated against Day 3 data.

Trade Analysis Watchdog

- 1

v5 entry price bug CONFIRMED -- COALINDIA short entry at 452.70 vs actual price 438. P&L overstated by ~40% on shorts. v5.3 fixes with live price confirmation.
- 2

Missed Rs 12-18K from Nifty 200 -- SIEMENS +4.76%, ABB +3.27%, ADANIGREEN +3.91% not in scanning universe. Now FIXED with Nifty 200 expansion.
- 3

Entry timing lag -- v4 enters 15-16 min after open, missing 1.5-1.9% of gap-up move. v5.3's staged entry addresses this.
- 4

Pairs divergence uncaptured -- SUNPHARMA -2.6% vs DRREDDY +1.6% = 4.2% spread. No pairs module exists yet.
- 5

v4 re-entry bug -- SHRIRAMFIN entered 4x, losing Rs 8,400. Re-entry cap now in place.

Strategy Discovery -- Top Signals to Add

RANK	SIGNAL	IMPACT	NOTES
1	Sector Rotation	9/10	40% CAGR on India backtest. Energy/metals/infra rallied while Nifty fell
2	Cross-Asset Features	8/10	DXY, crude, bonds, BTC correlation. Granger causality confirmed
3	Market Breadth	8/10	% above 20-DMA. A/D at 5.5% = extreme fear = potential bottom
4	Options PCR + IV Skew	8/10	PCR > 1.3 = reversal. Would improve v5.2 entry timing
5	Technical Expansion	7/10	ADX, Williams %R, calendar effects (Monday, expiry week)

Key Learnings

1. v5's SWING Pool is the Secret Weapon

Finds sector rotation stocks going UP even when the market drops. VOLTAS +3.14%, MCX +3.13%, BLUESTARCO, NTPC, VEDL all green on a bear day. This is the core differentiator.

2. v5.2 F&O Needs Complete Recalibration

Don't buy puts when VIX > 18. Switch to premium selling (straddle/strangle) on high-VIX days. Puts only when VIX < 15 AND regime score <= -4.

3. v5.3 is Too Conservative

Cancelled ALL 20 signals. Volume filter (> 1.2x average) too strict for bear days when volume naturally dips. Reduce to 0.8x or use session-relative volume.

4. v4 is Dead on Bear Days

Zero trades, zero P&L. VIX sizing + no BUY signals = complete paralysis. Cannot short, cannot adapt to sector rotation.

5. Sector Rotation is #1 Missing Signal

Energy, metals, infrastructure UP while IT, banking DOWN. A sector momentum scanner would have directed capital to right sectors automatically.

6. Entry Price Accuracy is Critical

Watchdog confirmed v5 short entries use stale prices. All engines should use `get_prices_batch()` at moment of entry. v5.3 already does this correctly.

7. A/D at 5.5% = Extreme Fear = Contrarian Signal

Historically, readings this extreme precede bounces within 1-3 days. Track as a contrarian buy indicator.

What Could Have Been Done Better

AREA	WHAT HAPPENED	WHAT SHOULD HAVE HAPPENED
v4	0 trades (paralyzed)	Deploy 20-30% into sector rotation winners
v5 shorts	Entry at stale prices	Use live prices (v5.3 approach)
v5.2 puts	Bought expensive puts (-91%)	Sell premium, or buy puts only when VIX < 15
v5.3 volume	All signals cancelled (0.0x)	Lower threshold to 0.8x, use session-relative
Pairs	DRREDDY/SUNPHARMA 4.2% spread missed	Build pairs trading module
Sectors	No sector-level analysis	Add sector rotation scanner

Platform Updates Built Today

AI Picks & Advisor -- Stocks/ETFs/MF + AI chat interface

Smart Name Matching -- 80+ stock names resolved

Live News Feed -- Google News RSS (replaces stale Day 1 news)

F&O Tab Redesign -- Groww-style: index cards + chain

Intraday Tab Redesign -- Index cards + top movers

Gainers Index Filter -- Nifty 50/100/200/Midcap/Smallcap

Swipe Removed -- Cleaner UX

Telegram /status -- Working and tested

v5 Telegram Alerts -- Entry/exit/regime/daily summary

Tomorrow's Plan

- 1 v5 continues as-is** -- winning engine, don't touch what's working
- 2 Recalibrate v5.2** -- switch from put buying to premium selling on high-VIX days
- 3 Adjust v5.3 volume threshold** -- from 1.2x down to 0.8x
- 4 Start building sector rotation scanner** -- highest impact new signal
- 5 Watch for bounce signal** -- A/D at 5.5% is extreme, contrarian buy may be coming

6 Run all 4 engines for continued comparison
