Prescription — flip a bear day

1. **BEAR regime gate (long-only engines):** 78 longs in a bear regime cost Rs 37,650 on the table. In BEAR, block new longs unless the stock is a confirmed dashboard BUY with positive day momentum.
2. **Short selection:** 22 shorts hit risers (Rs 3,068 on the table). Only short dashboard SELLS with negative day return AND price below VWAP — never short a stock that's green on the day.
3. **The scorer has no SELL output (root cause):** today it emitted 147 BUY / 121 HOLD / 113 AVOID / **0 SELL**. The engines literally cannot follow a short signal because none is produced — that is why a bear day becomes a long-only bloodbath. Add a real SELL tier to the scorer.
4. **Act on the bearish list:** shorting the AVOID stocks that fell would have made Rs 8,850 today with Rs 30,000 per name. The information was there; nothing acted on it.
